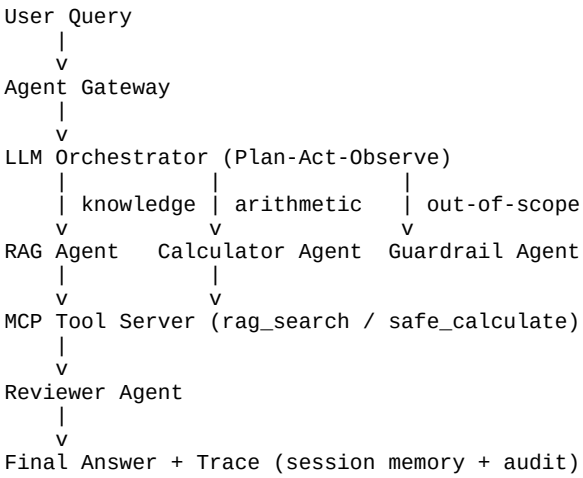
Architecture Diagram — Agentic AI System

Multi-Agent Workflow with MCP Tool Server



Components present in the code:

• LLM Orchestrator decides tool use (USE_RAG / USE_CALC / REFUSE).
• MCP Tool Server registers tools, lists them, and sanitizes responses.
• RAG and Calculator agents call the MCP server.
• Reviewer confirms a grounded answer was produced.
• Guardrail refuses out-of-scope and injection attempts.
• Session messages and step trace are kept in graph state.
